

ABSTRACT OF THE DISCLOSURE

5 A clip structure for supporting ornamental items on a pew
support includes a mounting portion for gripping a portion of a pew
support. The mounting portion has a pair of opposite inner and
outer faces, a pair of side edges, and a pair of end edges. The
mounting portion includes an elongate longitudinal extent having
10 opposite end regions, a pair of transverse extents each extending
from one of the end regions of the longitudinal extent in a generally
transverse orientation to the longitudinal extent, a pair of return
extents each extending from one of the transverse extents, with
each of the return extents extending towards each other. The
15 mounting portion includes a pair of free end extents each extending
from one of the return extents. Optionally, the clip includes a
securing portion mounting on the mounting portion for removably
securing an ornamental item on the mounting portion.
